

Positive Pressure Ventilator (PPV)

- **HIGH CAPACITY.**
- **MAXIMUM AIRFLOW.**
- **BETTER VISIBILITY.**
- **SAFER OPERATIONS.**

The Positive Pressure Ventilator (PPV) is a high-capacity ventilation fan designed to force large volumes of fresh air into a structure, thereby creating positive pressure that pushes smoke, heat, and toxic gases out through designated exhaust openings.

PPV systems are widely used by fire departments and rescue agencies to improve visibility, reduce interior temperatures and accelerate smoke removal during firefighting and emergency response operations.

Technical Specifications

High Output 9640 cfm.

Variable angles 30, 60, 90 and 120 for different applications.

Auto change over from electric to battery power and charging.

Battery indicator with temperature indicator.

Duct connections on both sides for positive ventilation or smoke extraction.

Run time on full speed more than 60 minutes.

Lithium Ion battery for long life & fast charging.

Charging more to 90% in less than 120 minutes.

Internal Battery for enhanced safety.

Variable Speed Control
